Velivo for phones – manual

Velivo for Android is a light, private browser in Velivo colours with built-in TV, a film library, a video and music player (VLC) and a link to Velivo for Windows. It needs Android 10 or newer. No accounts, no adverts, no tracking – everything stays on the phone. The computer is the "main" device: anything coming from the phone is always confirmed on the computer.

> 👓 **Good for people with weak eyesight – why:**
>
> - **everything zooms with two fingers** – menu, buttons, lists and page text (up to 220%), and each page remembers its own size;
> - **large tiles with icons and labels**, three to a row (two when zoomed a lot), large player buttons;
> - **clear colours** – dark, light or a **black-and-white high-contrast theme** (Theme in Settings);
> - **reader view** (just the text, large letters) and **read aloud**, also with the screen off;
> - **brightness and volume gestures** in the player, no hunting for small sliders;
> - **sticky notes with reminders** (doctor, medicines) and **protection against fake websites** – a red warning with one "Go back (safely)" button;
> - **no adverts or pop-ups** covering the content.
>
> Step-by-step setup: chapter 7.

This manual describes the full version (`Velivo-pelna.apk`). The Google Play versions differ only in YouTube – chapter 10.

1. Screen and menu

- **Address bar** – type an address or search words (searches go through Startpage).
- 🕶 – new private tab. **The button with a number** – the tab list with thumbnails (tap = switch, × or a sideways swipe = close).
- **Velivo logo** – the menu. Tiles are in five groups, three to a row: **Tabs**, **This page**, **Films and TV**, **Mine**, **Settings**. At the top, the green "🛡 Blocked ads" counter –

tap it for the privacy panel (chapter 6).

- **Swipe down** closes the menu and list windows (TV, library, notes, guide grid) and shows the page underneath – when the list is scrolled to the very top. Back closes them too.
- **Bottom bar** – ◀ back, ▶ forward, ⟳ reload, ⌂ start page, ＋ new tab (Quick Access).
- **The red "▶ YouTube" bar at the very bottom** – YouTube without adverts; press and hold: sleep timer and wake-up (chapter 8).
- **Press and hold on an advert** or an empty "ADVERT" box – Velivo asks whether to remove it.

- **Home-screen widget:** press and hold an empty spot on the home screen → **Widgets** → **Velivo**. It has 🔎 **Search** (opens Velivo with the keyboard), ▶ **YouTube** and 🗒 **Notes** with the nearest dates ("today", "tomorrow", a date). It shows only your notes on the phone and refreshes after every change. It can be resized.

1a. Zoom (for weaker eyesight)

- **Spread two fingers** in the menu or the lists of tabs, bookmarks, history, passwords and notes – everything gets bigger; pinch – smaller (80–220%). The top bar and the bottom buttons grow too, and at large sizes the menu shows tiles two to a row.
- **On a page** two fingers change that page's text size (50–300%) – **every site remembers its own size** (the start page / Quick Access always stays at 100%), and Velivo remembers its own separately. Set it once.
- In **reader view** two fingers change the text size (up to 48 pt), like A− / A+.

2. Tabs and This page

Tabs:

Tile	What it does
＋ New tab	Opens Quick Access – the same tiles and groups as on the computer
🕶 New private tab	A separate profile (cookies, sign-ins), no history; erased when the last private tab closes
⭐ Quick Access	Back to Quick Access in the current tab
🏦 Banking mode	Fingerprint / PIN entry, a separate permanent profile, no history or screenshots, locks after 10 minutes idle
📤 Send to computer	The current page opens on the paired computer (with the video position); private and banking tabs aren't sent
🖥 Desktop site	The desktop version of the page (for this tab); tap again for the mobile site

This page:

Tile	What it does
🔎 Find in page	A bar with a "3/12" counter, ▲ ▼ – previous / next match, ✕ closes
📖 Reader view	Just the article text, without adverts or menus
🎯 Remove element	Removes an advert or box with a tap of your finger
🔊 Read aloud	Reads the article; while reading the tile turns into ■ Stop reading
➕ Add bookmark	Adds the current page to bookmarks
✍ Fill in password	Fills in a saved password when the form appeared later

Reader view

- **A− / A+** – text size (remembered).
- 🔊 – read aloud from the reader; ✕ or Back closes it (and stops reading).

- Velivo **remembers where you left off** on each page and takes you back there next time. This stays on the phone only.

Read aloud

- Carries on with the **screen off** and in other apps – the notification shows "🔊 page title" with a **Stop** button. It disappears once the article is finished.
- Going back (◀ or Back) stops reading.
- No speech engine or voice for the phone's language – Velivo offers to **download Google Speech Services**.
- On Xiaomi phones set: Settings → Apps → Velivo → Battery saver → **No restrictions**, otherwise the system may cut reading short.

Removing elements with your finger

1. Menu → 🎯 **Remove element**. The page gets a light violet overlay and a bar appears at the top.
2. Tap the advert – Velivo picks the whole advert box (violet outline) and asks **"Remove?"**: **Remove**, **Select a larger area** or **Cancel**. It also works on adverts inside frames (iframes).
3. On the bar: ⬆ – larger area, 📋 – copy the element's code (to report an advert Velivo doesn't hide).
4. 🗑 – remove. The element disappears and takes up no space; it stays hidden on this site on later visits too.
5. ↺ – restore everything removed on this site. ✕ – finish.

Quicker: **press and hold** on an advert or an empty "ADVERT" box – Velivo asks whether to remove it (on text and links a long press works as usual). Velivo checks every layer under your finger, so it also finds adverts hidden beneath a transparent layer of the page.

The rules are kept on the phone only (they do not sync with the computer).

Films and TV (details in chapter 8a):

Tile	What it does
📺 TV	Channels from your IPTV list (M3U) with the TV guide, guide grid, catch-up ⏪ and scheduling ⏰
🎬 Library	Films and series from your Jellyfin server on the home network – continue watching, films, series with episodes
🎞 My films	Your own list of chosen files (phone, memory card, cloud drive) – + adds, press and hold removes from the list
🎵 My songs	Your list of songs from YouTube: categories, own playlists, playing in order
⭐ Add this song	Adds the video/song open on YouTube to My songs
🌙 Stop playing in…	Sleep timer: after this song, after 15–90 minutes or your own time; ⏰ wake-up with a song

3. Mine

Tile	What it does
🔖 Bookmarks, 🕘 History	A list with search, sorting (newest / A–Z) and ×
🔑 Passwords	The password list after a fingerprint / PIN; **Copy password** marks it as sensitive in the clipboard
🗒 Sticky notes, 📝 New note	Notes as on Windows – see below
📥 Downloads	Downloaded files

Passwords are encrypted with a key in the Android Keystore (the key never leaves the phone). Velivo fills them in only on https pages and on the home network (router, NAS).

Sticky notes

1. Menu → 📝 **New note** → choose a kind: 📝 Note, ✅ To do, 🛒 Shopping, 📞 Ring, ❗ Important, 💡 Idea, ⭐ For today.
2. Type. **The deadline** is a date in the text (e.g. `24.10`, `24.10.2026`, `2026-10-24`) – or tap 📅 and pick a day from the calendar (it is inserted at the cursor).
3. 🔁 **Repeat deadline:** one-off, every week, every 2 weeks, every month, every year or **Custom interval…** (every N days, weeks, months, years). Velivo counts the next dates from the one in the text, e.g. "4.10 bins" every week → 11.10, 18.10…
4. 🎨 changes the colour, 🗑 deletes, ✓ (or Back) saves.

Reminder: a notification **the day before** ("⏰ Due tomorrow") and **on the day** ("⏰ Due today") – daily at about 9:00, also after the phone is switched back on. Tapping it opens the note. The 🗒 **Sticky notes** list is sorted by the nearest date; the date and repeat show under the text.

4. Settings

Tile	What it does
Block ads	The same lists as on the computer (EasyList, EasyPrivacy, KAD) – bundled with the app, refreshed every 4 days. No empty box or error frame is left where an advert was (hiding rules as in uBlock Origin); no adverts on YouTube
Play in background	Video / music keep playing after you leave the app and with the screen off (notification with "Stop" and "🌙 Stop in 30 min"); a video moves to a picture-in-picture window
Theme	**Dark Velivo (default)** / light / like the phone – in Velivo colours, or **black and white (high contrast)** – black background, white text and frames, coloured icons; for weak eyesight
Sync with computer	Pairing, recovery file, phone name on the network
🌐 Language	Polish or English – for Velivo only (the system app-language picker)
Clear history	Deletes the browsing history
🧭 Default browser	Android's own question: make Velivo the default browser (links from other apps open in Velivo). Only if you want
▶ Default player	How to make videos and music from Gallery, Files or WhatsApp open in Velivo: Open with → Velivo → **Always**. Android does not let an app set this by itself
📱 Videos and music on the phone	All videos, music and sounds on the whole phone (system ones too) – ☰: everything / 🎬 videos / 🎵 my music / 🔔 built-in sounds (ringtones, notifications, alarms); A–Z or newest; counter at the top. The first time, Android asks for access to videos and music

5. Connecting to the computer

1. Phone and computer on the same Wi-Fi, Velivo open on both.
2. **The phone always invites:** menu → **Sync with computer → Connect to the computer (invite)**. For 3 minutes the phone sends an invitation.
3. The computer asks: "The phone … is asking to connect to Velivo on this computer. Connect?" → **Yes**. Compare the 6-digit code on both screens and confirm on both.

Privacy: the computer never looks for phones by itself – it only answers an invitation, and the phone sends one only for 3 minutes after you tap. Real-time sync (LAN) must be on on the computer. **Connecting a phone doesn't change the sync between your computers** – the computer keeps its key and the phone joins it.

With several computers use the **recovery file** (computer: Save recovery file…, phone: Load pairing recovery file).

What	How
Bookmarks, passwords, Quick Access	From the computer to the phone – automatically while Velivo is open
New bookmarks and passwords from the phone	To the computer – the computer asks whether to add them
A file from the phone	**Share → Velivo**; the computer asks for consent
A file from the computer	On the computer 📎 Send a file to: phone; saved to Downloads
A tab from the phone	Menu → 📤 Send to computer
A tab from the computer	On the computer: right-click a tab → 📺 Send to… → phone; the phone opens it straight away (YouTube from the same point)

6. Privacy

- **Privacy panel:** menu → tap the green "🛡 Blocked ads" counter at the top. It shows whether the connection is encrypted (🔒 https), how many adverts and trackers were blocked on this page and from which domains. **Turn off blocking here** – for a site that misbehaves with blocking (remembered for that site; **Turn on blocking here** undoes it).
- **Scam protection** (works on its own, offline, as in Velivo for Windows):
- **fake sites** of banks and well-known companies (e.g. `mbank-logowanie.com`, `rnbank.pl`, `paypa1.com`, `olx.pl.dostawa-pay.xyz`, addresses with characters disguised as letters) – a red warning, **Go back (safe)** or **I know this site – continue**; fakes of sites you have saved passwords for are caught too;
- **no "Get the app / Install / Add to Chrome" nags** – such boxes (e.g. on Startpage) are hidden, as in Velivo for Windows;
- **app (APK) downloads from outside Google Play** – a warning, **Don't download** by default;
- **HTTPS first** – pages open encrypted; if that fails, Velivo asks whether to open the page unencrypted (home network – router, NAS – without asking). A bad certificate is always blocked.
- The phone never sends its whole profile – only new items, which the computer confirms. The computer recognises the phone (shown as 📱 in the device list) and rejects packets from it that only computers send – the phone can't change the computer's settings.
- The connection is encrypted (AES-GCM) with the key from pairing; other phones on the network can read nothing.
- Your reading position, removed elements and settings stay on the phone.

- **Films and TV:** channel list addresses (often with a token) and Jellyfin sign-in data are encrypted on the phone (Android Keystore) and never go to logs or error messages. The channel list and guide are stored encrypted. Scheduled programmes remember only the channel name.
- **Videos and music on the phone:** Velivo reads them only when you ask (after Android's permission) and sends nothing.
- **No accounts, no telemetry:** Velivo sends no statistics or data to the author. A crash report is made only on the phone and goes anywhere only if you copy it yourself.

7. Velivo for people with weaker eyesight – step-by-step setup

Best set up once, together with the person who will use the phone:

1. **Size:** open the menu (the V logo) and spread two fingers in it until the text is comfortable (up to 220%). All of Velivo grows – the bar, buttons, menu, lists and page text. Velivo remembers it.
2. **Theme:** menu → ◐ Theme → light or dark – whichever is easier to see.
3. **Reading:** on a long article, menu → 📖 **Reader view** (just the text, two fingers = larger text) or 🔊 **Read aloud** (works with the screen off too; Back stops it).
4. **Safety:** warnings about fake bank sites and about installing apps from outside Google Play work on their own – it is worth saying: "if Velivo shows ⚠ **Warning**, tap **Go back (safe)**".
5. **Reminders:** 🗒 Sticky notes with a date (e.g. doctor 24.10) – a notification the day before and on the day; 🔁 for medicines every week or month.
6. **Adverts:** blocked straight away; for a leftover "ADVERT" box press and hold on it and tap **Remove**.

8. YouTube without adverts, picture-in-picture and music for sleep

> **First launch:** straight after installing (and once every few days, when Velivo refreshes its advert lists) the first page – e.g. YouTube – may take a few seconds longer to load, because Velivo is preparing ad blocking in the background. After that it is quick.

- **The red "▶ YouTube" bar at the very bottom** – opens YouTube (or returns to the open YouTube tab). Adverts are removed.
- **Plays in the background and with the screen off:** start a video or music, leave Velivo or turn the screen off – it keeps playing; **Stop** is in the notification.
- **The phone remembers where you stopped a video** (even without signing in to YouTube): when you come back to it, Velivo carries on from that point – "▶ Carrying on from 12:34". Watched to the end – next time from the start. Stored on the phone only (the last 300 videos), not in private or banking tabs.

- **Picture-in-picture (PiP):** when a video is playing and you go to the home screen, it moves to a small window above other apps (you can move it; tap to return to Velivo).
- 🌙 **Music for sleep (sleep timer):** press and hold the red YouTube bar and choose **When this track ends** (YouTube won't start the next one) or 15, 30, 45, 60, 90 minutes – then the music stops by itself. With the screen off the notification has 🌙 **Stop in 30 min** (each tap adds 30 minutes).
- ⏰ **Wake-up / scheduled playback:** press and hold the red YouTube bar → ⏰ **Wake-up with a track…** → choose the track: **from the current tab** (e.g. an open YouTube video), **from bookmarks** or **from history** → the time → when: **every day, Mon–Fri, weekend, chosen days** or **once**. At that time Velivo opens even on the lock screen and plays the track with the volume rising gently; **Turn off** or **Snooze 10 min**. In the same place: ▶ **Try the wake-up now** and **Turn off wake-up**. The alarm icon in the phone's status bar shows a wake-up is set.
- The sleep timer also has **Custom time (minutes)…** – any number of minutes.

8a. Films and TV

Player (VLC)

Velivo plays everything with the VLC library – the same as Velivo for Windows: TV channels (MPEG-TS, HLS), old AVI, MKV, MP4, AC3 sound, subtitles. Nothing to install.

- **Top bar:** title and what is on; 🗨 audio language and subtitles; 🌙 sleep timer; ⧉ picture-in-picture; ✕ close. On TV also ☆/⭐ favourite channel, ⏪ from the start of the programme (catch-up) or ⏩ live.
- **Middle:** ⏮ previous, ⏪ −10 s, ⏯, ⏩ +10 s, ⏭ next (on TV – previous / next channel in the list).
- **Bottom:** programme description (now, next, details), for films the progress bar and time.
- **Gestures (portrait and landscape):** left half up/down – **brightness**, right half – **volume** (☀ / 🔊 % indicator), sideways – seek in a film, double tap – ±10 s, tap – show / hide buttons.
- **Remembered position:** a film resumes where you stopped (Jellyfin – on the server too).
- **Picture-in-picture and background:** going Home – small window; with the screen off it keeps playing (notification with Stop). Closing the small window stops

playback.

- 🌙 **Sleep timer:** at the top "📺 **After this programme ends**" (TV – exactly when the programme ends, also after switching channels) or "🎬 **After this film ends**", then 15–90 minutes. Playback stops and the phone goes back to normal standby.
- **Music:** audio files get a space-like VLC visualisation (if the phone supports it).

📺 TV

1. **Channel list:** ⚙ → add a list: M3U address (link from your provider) or a file on the phone, optionally a TV guide (EPG) address. Lists can also be sent from Velivo for Windows: right-click 🎬 or 📺 → 📱 **Send Films & TV to phone** (large lists from files too). ⚙ → a list → **Edit / Delete**.
2. **Channels on screen:** A–Z by default (or favourites first / list order), search, ☰ group / ⭐ favourites / 📋 own lists. Under a channel: "Now … (until …) / Next …". ☆ – favourite. Press and hold a channel – 📅 its guide, add to an own list.
3. 📅 **TV guide:** what is on now / today at 20:00 / tomorrow / at a chosen time; ⏰ **Scheduled**; 📋 **What's on** (channels of the chosen group A–Z → channel guide); 🗓 **Guide grid** (channels A–Z × time, red "now" line, scroll sideways – forward and into the archive).
4. **A programme** (tap in the guide, grid, "what's on"):
   - ⏰ **Turn on at 21:00** → "Turn on and keep playing" or "Turn on and stop when it ends". At that time Velivo turns the channel on by itself – also on the lock screen (system alarm).
   - ⏪ **Watch from the archive** – past programmes (as many days back as the channel has, e.g. 3; at most 7) or the current one from its start. Velivo finds the catch-up format your provider uses (Flussonic, Xtream, shift, own pattern from the list) and remembers it. After a catch-up programme it plays the next one, and when it reaches "now" – live.
   - ▶ **Watch now**, **i Description**.
8. **Fast:** the list and guide are stored on the phone (encrypted) – TV opens at once, the guide refreshes in the background (every 12 hours), ⟳ forces a refresh. At night (charging + Wi-Fi + phone idle) Velivo refreshes lists, guide and library by itself.
9. **When a channel does not play:** after 25 s a message – many lists allow one connection at a time; stop TV on the other device (e.g. the computer).

- 📲 **Films and TV without pairing (e.g. your mum's phone):** TV → ⚙ → 📲 **Ask the computer for Films and TV** (or the button when adding a list). The computer (Velivo for Windows on the same network, LAN sync on) asks with a 6-

digit code – the owner clicks **Yes**, the phone shows the same code and asks before saving. **Only** TV channel lists and the Jellyfin server address arrive (no key – sign in with your own Jellyfin user, e.g. "Mum"). **Passwords, bookmarks and Quick Access never go this way** – only after pairing. The exchange is encrypted with a one-time key. Note: the channel list gives access to your TV provider (often one stream at a time).

🎬 Library (Jellyfin)

- **No API keys:** Velivo finds the Jellyfin server on your home network → pick a user → password. The server gives the phone its own token (visible in Jellyfin → Devices, can be revoked). Or the settings come from the computer.
- **Views:** continue watching, films, series (☰); sort A–Z / newest / year. Series → episodes.
- The library opens at once from the phone's copy and refreshes from the server – films deleted on the server disappear, new ones appear.

🎞 My films and 📱 videos and music on the phone

- 🎞 **My films** – your chosen list of files (+ add, press and hold – remove from the list; the file stays on the phone).
- 📱 **Videos and music on the phone** (Settings) – everything on the phone, split into videos, my music and built-in sounds; tap plays, ⏮ ⏭ move through the list.

🎵 My songs (YouTube)

Menu → ⭐ **Add this song** on an open YouTube video (category, playlists) → 🎵 **My songs**: A–Z / categories / newest, ☰ category or playlist, plays in order. Stored only on the phone.

9. When something goes wrong

- If Velivo closes because of an error, next time it opens it shows **"Velivo closed because of an error"** with a **Copy** button – send that description to the Velivo developer (no addresses or page content – just how the error happened).
- An advert Velivo doesn't hide: 🎯 Remove element → tap it → 📋 copies the element's code for a report.

- A site misbehaves because of ad blocking: the privacy panel (the 🛡 counter in the menu) → **Turn off blocking here**.
- Reading or music stops after the screen turns off (Xiaomi): Settings → Apps → Velivo → Battery saver → **No restrictions**.
- The wake-up didn't ring: check the phone isn't muted and that Velivo has **Alarms & reminders** permission in Android Settings.

10. Installing, updates and app versions

- **Installing from the file** `Velivo-pelna.apk` (e.g. from WhatsApp): the phone asks to allow installs from that source. Google Play Protect warns about **every** app from outside Google Play – choose **More details → Install anyway**. It does not mean Velivo is harmful; there is no warning when installing from Google Play.
- **Updates:** open the new `Velivo-pelna.apk` and tap **Update** – it installs over the old version and everything stays (settings, channel lists, favourites, passwords, notes). **Do not uninstall** the old version – you would lose your data.
- **Three versions from one code base:**

Version	File	For whom	YouTube
Full	`Velivo-pelna.apk`	You, family, friends (install from the file)	No adverts, in the background, "YouTube · no adverts" bar, My songs
Store	`Velivo-sklep.aab`	Google Play – careful	No ad blocking on YouTube and no YouTube in the background
Store YT	`Velivo-sklepyt.aab`	Google Play – like Brave	Ad blocking and background play on YouTube too, without advertising it

Everything else (browser, privacy, TV, films, Jellyfin, notes, sync) is the same. The full version and the store versions are different apps for the phone – they update separately (file / Google Play).
